

Welcome to Cedarville!

If you are visiting Cedarville University as part of a camp or conference, you will be given a password during check-in that will allow you to access Cedarville University's network (CedarNet).

If you are a guest on Cedarville's campus but are not here for a camp or conference, you can use the "cu-guest" connection option on a mobile device to access wireless. Keep in mind that this option is not secured and will cause you to reconnect approximately every 40 minutes. If you would like a more secure connection option that you can use for longer periods of time, you can connect to "cu-secure" (see the "Connect to CU-Secure Network" section below).

Connect Your Personal Computer or Device

The following instructions will help you connect your personal computer or other mobile device to CedarNet.

Note:

If you have a Windows laptop, please contact TechStop (937-766-4156) if you are unable to connect to wireless.

Wireless Connection

Connect to CU-Events Network (phones, tablets, laptops). This option is for guests attending a camp/conference.

1. Enable wireless on your phone or laptop > Select **cu-events** from the list of available wireless networks.
2. When prompted, enter the password ("network security key") that was provided by the event coordinator > Click **Connect** (or **Next** on some devices).
3. When you open an Internet browser, if it asks you to "Confirm a Security Exception," click **Confirm** and add the exception for Cedarville University.

Connect to CU-Secure Network

You will want to use the **cu-secure** wireless network if you require a more secure wireless connection for your personal laptop. To use this option, you can have the person that you are visiting create a temporary CedarNet username and password for you. Instructions for this option are listed in the "CU: Create Guest CedarNet Account" help page at cedarville.edu/techhelp. Please contact the CU TechStop technicians (937-766-4156) for assistance.

Wired Connection (Residence Halls)

If you are staying in a residence hall, each room has two network ports available for you to connect your personal laptop.

To access CedarNet using a wired connection, attach a CAT-5e or newer Ethernet network cable to the network port on your laptop and insert the cable into the active network port in the wall.

Physical ports are always live. Once you have plugged in the network cable, you will be connected to CedarNet. Log in using the CedarNet username and password that was assigned to you.

Please contact the CU TechStop technicians at 937-766-4156 between 11 a.m. and 4:30 p.m. on weekdays. We will be happy to help you with the connection process!
